

RECRUITMENT SPECIFICATION

Research Associate

4basebio is an innovative gene synthesis company with the ambition to provide high quality, synthetic DNA for use in gene therapies and gene vaccines. The company is setting up a new research and development team at its offices in Cambridge, UK to facilitate the scaling and optimisation of its proprietary DNA manufacturing process and is looking for dynamic and experienced team members to help achieve its ambitions and goals.

Responsibilities:

- Experimental design, implementation, and data analysis
- Maintain an accurate and complete record of laboratory work performed
- Actively participate and contribute to laboratory and company meetings
- Maintain an accurate and complete record of laboratory work performed
- To use and maintain company equipment in accordance to the company's SOPs and health & safety guidelines
- To undertake any other appropriate roles and responsibilities that reasonably fall within the role holder's skills and experience as requested
- Be prepared to travel to other 4basebio sites

Person Specification:

- BSc / MSc / PhD in molecular biology, biochemistry or biotechnology
- Experience with working with DNA and enzymes
- Experience in chromatography and other relevant purification or analytical techniques
- At least 2 years' experience in a commercial laboratory environment
- Good communication skills with both technical and non-technical collaborators
- Team focussed with the ability to work effectively with others

Please note start date for this role is 1st September 2020
